

MolPress

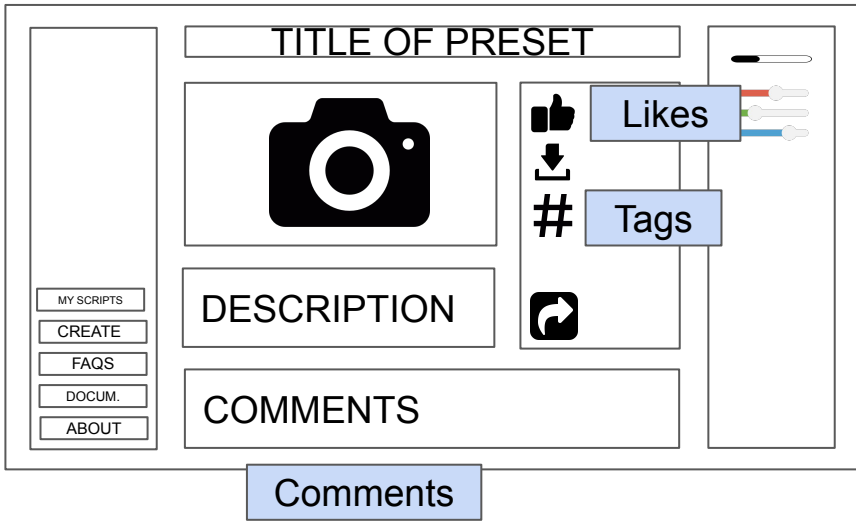

ETLs we will need

- Add presets, connected to the preset upload page.
- Add users: for sign up new users
- Add comments connected to the preset visualizer page to save the comments
- Add likes: same as above.

Then we will be retrieving the database:

- For presets in the browser page
- For preset details for the preset visualizer page
- For signing in

The databases used are:

- The [Preset](#) table to show the information
- The [Tags](#) table to show tags (or just the string)
- The [Likes](#) table (or just the number in the preset (anar actualitzant l'entrada potser no és bo...))
- The [Comment](#) table to show the comments
- The [User](#) table know who likes or who downloads

Presets

The databases used are:

- The [Preset](#) table to insert the information
- The [Tags](#) table to insert tags (or just the string)
- The [User](#) table to know who creates
